

Review of the Samyang 8mm T3 .8 SE AS UMC Fish-eye CS II VDO

Best Value Model I bought for 13450 and the lens is very good, the wide angle of view allows you to see the world through other eyes and capture the real scale of the event (landscape, architecture, sports). Sharp at f/8, lens is eternal, because there are no manual and automatic mechanisms and the quality of the material is very decent and everything stays well and nothing touches.

Excellent Model There is nothing to compare, the first fish-eye view. However, I was pleasantly surprised with the quality and depth of the photos. Of course, the reproduction of colors could be better, but for this price there is nothing to say. By the way, the quality of construction is very good. The manual aperture allows you to speed up the shooting process several times. Completely manual, offers many negative and many positive points. Well, where else can you learn to shoot quickly with manual focus? For example, I now prefer manual over automatic on the rest of the lenses. Fast. Besides that, the battery is very hard. In general, I would recommend.
